

EXECUTIVE STRATEGY PRESENTATION

STRATEGIC **CHURN** MITIGATION

A Data-Driven Analysis of Customer Retention & Revenue Optimization for
Fiscal Year 2026.

Data Analyst: Portfolio Project Showcase

Situational Overview

Establishing the baseline performance metrics and the immediate need for strategic intervention in high-volatility segments.

| Critical Performance Baseline

26.58%

Overall Enterprise Churn Rate

Significant Retention Gap

Current analysis identifies a leakage of 1,869 customers from a base of 7,032. This represents a critical performance risk that exceeds industry benchmarks by approximately 8.5%.

The primary volatility is concentrated in short-term contract structures, necessitating a shift toward long-term value lock-in strategies.

| Contractual Friction Points

● **Month-to-Month:** 42.71% Churn

● **One Year:** 11.27% Churn

● **Two Year:** 2.83% Churn

Conclusion: The month-to-month segment is 15x more likely to churn than two-year contract holders.

| Product Vulnerability Analysis

Fiber Optic Service Risk

Despite being the premium tier, Fiber Optic services exhibit the highest attrition rate at 41.89%.

This suggests a disconnect between the price premium and service reliability or perceived value compared to DSL alternatives.

High-Risk Customer Profiling

Using SQL-based segmentation (CASE Logic), we have identified critical risk clusters based on tenure, service type, and contract status.

Risk Category	Segment Profile	Average Churn	Strategic Action
Very High Risk	Tenure < 12m, Fiber, M2M	47.2%	Immediate Intervention
High Risk	Tenure 12-24m, Fiber, M2M	31.5%	Loyalty Incentive
Medium Risk	Tenure > 24m, DSL, M2M	15.8%	Product Upsell

| The 12-Month Retention Cliff

| Financial Implications of Churn

Revenue Leakage Assessment

Every lost customer in the Fiber Optic / Month-to-Month segment represents a loss of high-margin recurring revenue.

Strategic shifting of just 15% of the "Very High Risk" segment to One-Year contracts would result in a projected revenue stabilization of \$2.4M annually.

- Reduced Customer Acquisition Cost (CAC)
- Increased Lifetime Value (CLV)
- Improved EBIT Margins

| Retention Strategy Pillars

Contract Incentives

Offer 10% discount on 1-Year plans for Month-to-month Fiber optic users.

Tech Reliability

Investigate Fiber service reliability to reduce attrition in the premium tier.

Early Engagement

Automated "Welcome Loyalty" touchpoints during the critical first 90 days.

| Implementation Roadmap

Q1: Deep Dive

Root cause analysis for Fiber Optic technical issues.

Q2: Migration

Launch M2M-to-Contract incentive pilot program.

Q3: Optimization

Automate Risk-Category based churn alerts in CRM.

Q4: Evaluation

Review Year-over-Year churn rate reduction targets.

"Data is the radar that detects churn before it happens; strategy is the shield that prevents it."

— Strategy Leadership Insight, 2026

QUESTIONS & NEXT STEPS

Thank you for your attention to this critical business initiative.
